

EZfenz AAC Fencing

Perimeter fencing can have a number of different functions, from simply being a boundary marker to providing a very high level of security. EZfenz is a lightweight Autoclaved Aerated Concrete (AAC) panel fence system which can be easily customised to create an attractive and effective solution for sound abatement, security and privacy. In combination with your EZfenz posts and panels, you can also use preassembled wood fencing sections; trellis and corrugated iron just to name a few. The style of the fence you ultimately choose is only limited by your own needs and your own imagination. The do-it-yourself EZfenz System will provide you with the crisp clean look of solid plastered masonry at a fraction of the price and all without having to lift a plasterer's trowel.
