

## **Aerated Concrete Blocks**

Aerated Blocks - MLC is a pre-blended, cement-based plaster that is used in conjunction with an open weave fibreglass mesh as a single levelling/reinforcing coat over aerated blocks. The specially developed plaster mix contains a blended mix of aggregates, cement, proprietary ingredients and a unique fibre reinforcement which, together with the addition of the 150 gram layer of fibreglass mesh ties the surface of the blocks and provides an excellent surface key for any of a variety of different plaster finishes.
